

BRIXTON METALS CORPORATION

Management Discussion and Analysis

For the three months ended December 31, 2015 and 2014

**Containing information up to and including
February 29, 2016**

Notice

Management's Discussion and Analysis ("MD&A") is intended to help the reader understand Brixton Metal Corporation's (the "Company" or "Corporation") condensed interim financial statements. The information provided herein should be read in conjunction with the condensed interim financial statements for the three months ended December 31, 2015 and 2014. The following comments may contain management estimates of anticipated future trends, activities or results. These are not a guarantee of future performance, since actual results could change based on other factors and variables beyond management control.

Management is responsible for the preparation and integrity of the condensed interim financial statements, including the maintenance of appropriate information systems, procedures and internal controls and to ensure that information used internally or disclosed externally, including the condensed interim financial statements and MD&A, is complete and reliable. The Company's board of directors follows recommended corporate governance guidelines for public companies to ensure transparency and accountability to shareholders. The board's audit committee meets with management quarterly to review the condensed interim financial statements including the MD&A and to discuss other financial, operating and internal control matters.

The reader is encouraged to review Company statutory filings on www.sedar.com and to review general information.

On May 23, 2014, the Company consolidated its issued and outstanding shares on the basis of 10 pre-consolidated shares for one post-consolidated share. All share and per share amounts in this MD&A have been adjusted to reflect the share consolidation.

All currency amounts are in Canadian dollars unless otherwise noted.

Description of Business

The Company is an exploration stage company and engages principally in the exploration and development of mineral properties in Canada. Brixton became a public entity through a transaction whereby Marksmen Capital Inc.(a capital pool company trading on the TSX-V) acquired all of the issued and outstanding common shares of Brixton in exchange for the issuance of 1.8 common shares of Marksmen for each common share of Brixton. This transaction was completed on December 7, 2010 and constituted a reverse takeover transaction pursuant to the terms of the TSX-Venture Exchange.

Caution Regarding Forward Looking Statements

This MD&A contains forward-looking statements and forward-looking information (collectively, "forward-looking statements") within the meaning of applicable Canadian and US securities legislation. These statements relate to future events or the future activities or performance of the Company. All statements, other than statements of historical fact are forward-looking statements. Forward-looking statements are typically identified by words such as: believe, expect, anticipate, intend, estimate, postulate and similar expressions, or which by their nature refer to future events. These forward looking statements include, but are not limited to, statements concerning:

Brixton Metals Corporation

Management Discussion and Analysis

For the three months ended December 31, 2015 and 2014, and containing information up to February 29, 2016

- the Company's strategies and objectives, both generally and in respect of its specific mineral properties;
- the timing of decisions regarding the strategy and costs of exploration programs with respect to, and the issuance of the necessary permits and authorizations required for, the Company's exploration programs;
- the timing and cost of planned exploration programs of the Company, and the timing of the receipt of results there from;
- the Company's future cash requirements;
- general business and economic conditions;
- the Company's ability to meet its financial obligations as they come due, and to be able to raise the necessary funds to continue operations;
- the timing and pricing of proposed financings if applicable;
- the anticipated completion of financings;
- the anticipated receipt of regulatory approval/acceptance of financings;
- the anticipated use of the proceeds from the financings;
- the potential to verify and potentially expand upon the historical resources;
- the potential for the expansion of the known mineralized zones; and
- the potential for the amenability of mineralization to respond to proven technologies and methods for recovery of ore.

Although the Company believes that such statements are reasonable, it can give no assurance that such expectations will prove to be correct. Inherent in forward looking statements are risks and uncertainties beyond the Company's ability to predict or control, including, but not limited to, risks related to the Company's inability to negotiate successfully for the acquisition of interests in mineral properties, the determination of applicable governmental agencies not to issue the exploration concessions applied for by the Company or excessive delay by the applicable governmental agencies in connection with any such issuances, the Company's inability to identify one or more economic deposits on its properties, variations in the nature, quality and quantity of any mineral deposits that may be located, the Company's inability to obtain any necessary permits, consents or authorizations required for its activities, to produce minerals from its properties successfully or profitably, to continue its projected growth, to raise the necessary capital or to be fully able to implement its business strategies, and other risks identified herein under "Risk Factors".

The Company cautions investors that any forward-looking statements by the Company are not guarantees of future performance, and that actual results are likely to differ, and may differ materially, from those expressed or implied by forward looking statements contained in this MD&A. Such statements are based on a number of assumptions which may prove incorrect, including, but not limited to, assumptions about:

- the level and volatility of the prices for precious metals;
- general business and economic conditions;

Brixton Metals Corporation

Management Discussion and Analysis

For the three months ended December 31, 2015 and 2014, and containing information up to February 29, 2016

- the timing of the receipt of regulatory and governmental approvals, permits and authorizations necessary to implement and carry on the Company's planned exploration programs;
- conditions in the financial markets generally, and with respect to the prospects for junior exploration companies specifically;
- the Company's ability to secure the necessary consulting, drilling and related services and supplies on favorable terms;
- the Company's ability to attract and retain key staff, and to retain consultants to provide the specialized information and skills involved in understanding the precious metal exploration, mining, processing and marketing businesses;
- the nature and location of the Company's mineral exploration projects, and the timing of the ability to commence and complete the planned exploration programs;
- the anticipated terms of the consents, permits and authorizations necessary to carry out the planned exploration programs and the Company's ability to comply with such terms on a cost-effective basis;
- the ongoing relations of the Company with government agencies and regulators and its underlying property vendors/options; and
- metallurgy and recovery characteristics of the Company's mineral properties are reflective of the deposit as a whole.

These forward looking statements are made as of the date hereof and the Company does not intend and does not assume any obligation to update these forward looking statements, except as required by applicable law. For the reasons set forth above, investors should not attribute undue certainty to or place undue reliance on forward-looking statements.

Historical results of operations and trends that may be inferred from the following discussion and analysis may not necessarily indicate future results from operations. In particular, the current state of the global securities markets may cause significant reductions in the price of the Company's securities and render it difficult or impossible for the Company to raise the funds necessary to continue operations. See "Risk Factors – Insufficient Financial Resources/Share Price Volatility".

Caution Regarding Adjacent or Similar Mineral Properties

This MD&A may contain information with respect to adjacent or similar mineral properties in respect of which the Company has no interest or rights to explore or mine. The Company advises US investors that the mining guidelines of the US Securities and Exchange Commission (the "SEC") set forth in the SEC's Industry Guide 7 ("SEC Industry Guide 7") strictly prohibit information of this type in documents filed with the SEC. Readers are cautioned that the Company has no interest in or right to acquire any interest in any such properties, and that mineral deposits on adjacent or similar properties, and any production therefore or economics with respect thereto, are not indicative of mineral deposits on the Company's properties or the potential production from, or cost or economics of, any future mining of any of the Company's exploration and evaluation assets.

Brixton Metals Corporation

Management Discussion and Analysis

For the three months ended December 31, 2015 and 2014, and containing information up to February 29, 2016

All of the Company's public disclosure filings, including its most recent management information circular, material change reports, press releases and other information, may be accessed via www.sedar.com and readers are urged to review these materials, including the technical reports filed with respect to the Company's exploration and evaluation assets.

Selected annual information

	Year ended September 30, 2015	Year ended September 30, 2014	Year ended September 30, 2013
Loss for year	\$ (689,906)	\$ (1,879,318)	\$ (3,393,662)
Write-off of mineral properties	\$Nil	\$Nil	\$Nil
Loss per Share (Basic and Diluted)	\$0.06	\$0.17	\$0.41
Total Assets	\$3,564,331	\$4,265,588	\$4,560,919
Total Long-term Liabilities	\$Nil	\$Nil	\$Nil
Number of shares outstanding at year end	11,490,876	11,490,876	9,791,859

Highlights for the three months ended December 31, 2015 and up to February 29, 2016

- On December 12, 2014, the Company filed a National Instrument 43-101 technical report for the Thorn property, effective date of September 26, 2014.
- On April 7, 2015, the Company issued 35,000 stock options to a director, exercisable at \$0.14 per share for a period of 10 years.
- On October 11, 2015, 1,323,311 warrants expired unexercised.
- On February 2, 2016, the Company completed an asset purchase and sale agreement with Canagco Mining Corp. ("Canagco"), whereby the Company acquired a 100% interest in the claims comprising the Langis silver mine located in the Cobalt silver mining camp of Northeastern Ontario, for consideration of 3,242,500 common shares and a cash payment of \$55,000. The Company also paid a finder's fee of \$6,887 and common shares of 101,283.

Results of Operations

Three months ended December 31, 2015 compared with three months ended December 31, 2014

The following analysis discusses the variations in the Company's quarterly results but, as with most junior mineral exploration companies, the results of operations (including net losses) are not the main factor in establishing the financial health of the Company. Of additional significance are the exploration and evaluation assets in which the Company has, or may earn an interest, its working capital and how many shares it has outstanding. The variations seen over the quarters are primarily a result of the level of activity of the Company's ongoing property evaluation program and the timing

Brixton Metals Corporation

Management Discussion and Analysis

For the three months ended December 31, 2015 and 2014, and containing information up to February 29, 2016

and results of the Company's exploration activities on its then current properties. There are no general trends regarding the Company's quarterly results, and the Company's business of mineral exploration is currently seasonal, as it can only work on the Thorn and Langis properties on a strict summer/fall basis. Quarterly results can vary significantly depending on whether the Company has abandoned any properties or granted any stock options and these are the factors that account for material variations in the Company's quarterly net losses, none of which are predictable. The write-off of exploration and evaluation assets can have a material effect on quarterly results as and when they occur, as it did in the quarter ended December 31, 2011 with the write-off of Alaskan assets. The other major factor which can cause a material variation in net loss on a quarterly basis is the grant of stock options due to the resulting stock-based compensation charges which can be significant when they arise. General operating costs other than the specific items noted above tend to be quite similar from period to period.

During the three months ended December 31, 2015, the Company incurred a loss of \$144,399 (2014 - \$210,311) due to the following:

- Geological exploration costs were \$8,608 in the three months ended December 31, 2015, comparable to \$44,537 in the prior period. The Company did not complete an exploration program during the current year in order to conserve cash, while in the comparative period the 2014 exploration program was ongoing.
- Salaries and employee benefits were \$80,500 for the three months ended December 31, 2015 (2014 - \$83,684) was comparable to the prior period.
- Professional services of \$28,306 (2014 - \$55,531), office and sundry of \$4,259 (2014 - \$7,686) and investor relations of \$1,029 (2014 - \$2,375) for the three months ended December 31, 2015 decreased compared to the prior period due to a reduction in corporate activity in order to conserve cash.

Summary of Quarterly Results

	Quarter Ended December 31, 2015	Quarter Ended September 30, 2015	Quarter Ended June 30, 2015	Quarter Ended March 31, 2015
Loss for period	\$144,399	\$144,280	\$187,616	\$147,679
Loss per Share (Basic and Diluted)	\$0.01	\$0.01	\$0.02	\$0.01
Total Assets	\$3,420,708	\$3,564,331	\$3,704,598	\$3,885,900
Total Long-term Liabilities	Nil	Nil	Nil	Nil
Weighted average shares outstanding for the period	11,490,876	11,490,876	11,490,876	11,490,876
Cash Dividends Declared	Nil	Nil	Nil	Nil

Brixton Metals Corporation**Management Discussion and Analysis**

Mineral property costs

The tables below set out the quarterly resource property costs (recoveries), both acquisition and exploration, incurred for the past eight quarters (does not include general exploration costs):

	Quarter Ended December 31, 2015	Quarter Ended September 30, 2015	Quarter Ended June 30, 2015	Quarter Ended March 31, 2015
Thorn - BC	\$8,608	\$(2,243)	\$Nil	\$(30,139)
Total	\$8,607	\$(2,243)	\$Nil	\$(30,139)

	Quarter Ended December 31, 2014	Quarter Ended September 30, 2014	Quarter Ended June 30, 2014	Quarter Ended March 31, 2014
Thorn - BC	\$44,537	\$39,804	\$420,634	\$53,182
Total	\$44,537	\$39,804	\$420,634	\$53,182

Liquidity and Capital Resources

To date the Company has financed its operations through the sale of its common shares. As at December 31, 2015 the company has \$355,208 in current assets and \$20,520 in current liabilities. The receivable balance is composed of amounts receivable the Government of Canada and Government of British Columbia.

The Company has no source of revenue, income or cash flow. It is wholly dependent upon raising funds through the sale of its common shares to finance its business operations. Over the next twelve months, the Company expects it will require additional capital to further develop and explore its Thorn and Langis projects and to cover general and administration costs.

Brixton Metals Corporation

Management Discussion and Analysis

For the three months ended December 31, 2015 and 2014, and containing information up to February 29, 2016

The Company may also seek to raise additional funds through public or private equity funding, bank debt financing or from other sources to support ongoing property development. There can be no assurances that this capital will be available in amounts or on terms acceptable to the Company, or at all. These conditions are material uncertainties that cast significant doubt about the Company's ability to continue as a going concern.

Use of Proceeds

Reconciliation of Use of Proceeds from Private Placements in fiscal 2012, 2013 and 2014

The Company has completed the following private placements:

- In April 2012, the Company raised \$1.0 million through the sale of securities of the Company.
- On September 26, 2012 the Company raised an additional \$1.4 million.
- On December 21, 2012, the Company raised an additional \$1.3 million.
- On February 26, 2013, the Company raised an additional \$2.6M.
- On June 14, 2013, the Company raised an additional \$261,000.
- On June 27, 2013, the Company raised an additional \$378,000.
- On October 11, 2013, the Company raised an additional \$1.4 million.
- On November 8, 2013, the Company raised an additional \$150,000.
- On December 23, 2013, the Company raised an additional \$140,000.

The following table sets out a comparison of how the Company used the proceeds following the closing date, an explanation of the variances and the impact of the variance on the ability of the Company to achieve its business objectives and milestones.

Intended Use of Proceeds	Actual Use of Proceeds
To advance the Company's properties and for general and administrative purposes.	As at December 31, 2015 the Company had spent approximately \$6.5M on its Thorn property. The majority of the funds raised were used for drilling on the Thorn property with some additional amounts reserved for G&A going forward.
Explanation of variances and the impact of variances on the ability of the Company to achieve its business objectives and milestones	The Company is under budget and completed two phases of drilling in 2013 and one additional phase in 2014 on the Thorn property. The funds raised during the prior years have been used to fund the Company's continuing exploration on the Thorn property and general working capital.

Mineral Property Overview

The Company holds a 100% interest in two projects, the Thorn gold-silver project in British Columbia, Canada and the Langis silver project in Ontario, Canada.

Thorn Property, British Columbia, Canada

Brixton did not conduct any exploration on the Thorn property during the 2015 field season, the claims are all in good standing with no additional funds required to be spent until 2025.

Langis Property, Ontario, Canada

The Langis project, including other lands in the Cobalt Camp is 2,520 hectare in size. The project is located 500 km north of Toronto, Canada. The high-grade silver mineralization occurs as steeply-dipping veins within any of the three main rock types; Archean volcanics, younger-age Coleman Member sediments and Nipissing diabase. The Cobalt camp including the Langis Mine has historically produced over 420 million ounces of silver with some historical reported assays reaching 255,146 g/t Ag or 9,000 oz/t Ag over 0.36 metres. A new zone was discovered circa 1990 east of the mined area that intersected by drilling: 1,550 g/t over 9.4 metres and 1,262.80 g/t Ag over 3.9 metres. This area will be the focus for follow up exploration work. According to historical reports on the Langis property, the zone noted above was traced to over 1,000 metres along strike and a vertical extent of 260 metres with true thickness being unknown. The Langis project does not currently contain any NI 43-101-compliant mineral resources or mineral reserves.

Langis Project Highlights

- Past production of 10.4M ounces of silver from 379,479 tonnes (418,305 short tons), having a recovery grade of approximately 25 oz/t (777.60 g/t) silver from 1908 to 1989.
- Silver recovery estimates range from 88% to 94% based on historical records.
- Excellent local infrastructure; year-round road access, close proximity to power, railway, gas-pipeline, small scale mills, a refinery and assay lab.
- The most important ore mineral is native silver followed by cobaltite, niccolite, ruby silver, argentite, bismuth and chalcopyrite. Please see ore image in the link below.
- Drilling next to historical mine site intersected a new zone prior to the silver price collapse in 1990: 1,550.50 g/t over 9.4 metres and 1,262.80 g/t Ag over 3.9 metres.
- High-grade silver intersections have been recovered from three main rock types: Nipissing diabase, Coleman sediments and Archean volcanics.

Langis Drill Intercepts, Discovery Zone Pre-1990:

Drill ID	Grade Ag oz/t	Interval feet	Grade Ag g/t	Interval metres
64-85	51.00	5.00	1,586.28	1.52
64-80	38.90	8.00	1,209.93	2.44
64-51	49.85	31.00	1,550.50	9.45
64-55	61.00	11.40	1,897.31	3.47
64-68	67.40	4.50	2,096.38	1.37
64-89	40.60	13.00	1,262.80	3.96
54-68	19.80	4.00	615.85	1.22

Mr. Sorin Posescu, P.Geo., VP Exploration, is a Qualified Person as defined under National Instrument 43-101 standards and has reviewed and approved this summary of results.

Risk Factors

The Company is in the business of acquiring, exploring and, if warranted, developing and exploiting natural resource properties, currently in British Columbia. Due to the nature of the Company's proposed business and the present stage of exploration of its mineral properties (which are primarily early stage exploration properties with no known resources or reserves), the following risk factors, among others, may apply:

Resource Exploration and Development is Generally a Speculative Business: Resource exploration and development is a speculative business and involves a high degree of risk, including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but from finding mineral deposits which, though present, are insufficient in size to return a profit from production. The marketability of natural resources that may be acquired or discovered by the Company will be affected by numerous factors beyond the control of the Company. These factors include market fluctuations, the proximity and capacity of natural resource markets, government regulations, including regulations relating to prices, taxes, royalties, land use, importing and exporting of minerals and environmental protection. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital. **The vast majority of exploration projects do not result in the discovery of commercially mineable deposits of ore.** Substantial expenditures are required to establish ore reserves through drilling and metallurgical and other testing techniques, determine metal content and metallurgical recovery processes to extract metal from the ore, and construct, renovate or expand mining and processing facilities. No assurance can be given that any level of recovery of ore reserves will be realized or that any identified mineral deposit, even if it is established to contain an estimated resource, will ever qualify as a commercial mineable ore body which can be legally and economically exploited. The great majority of exploration projects do not result in the discovery of commercially mineable deposits of ore.

Fluctuation of Metal Prices: Even if commercial quantities of mineral deposits are discovered by the Company, there is no guarantee that a profitable market will exist for the sale of the metals produced. Factors beyond the control of the Company may affect the marketability of any

substances discovered. The prices of various metals have experienced significant movement over short periods of time, and are affected by numerous factors beyond the control of the Company, including international economic and political trends, expectations of inflation, currency exchange fluctuations, interest rates and global or regional consumption patterns, speculative activities and increased production due to improved mining and production methods. The supply of and demand for metals are affected by various factors, including political events, economic conditions and production costs in major producing regions. There can be no assurance that the price of any commodities will be such that any of the properties in which the Company has, or has the right to acquire, an interest may be mined at a profit.

Share Price Volatility: During the past year, exploration or development stage companies have experienced unprecedented declines in price which have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. Most significantly, the share prices of junior natural resource companies have experienced an unprecedented decline in value and there has been a significant decline in the number of buyers willing to purchase such securities. **As a consequence, despite the Company's past success in securing significant equity financing, market forces may render it difficult or impossible for the Company to secure places to purchase new share issues at a price which will not lead to severe dilution to existing shareholders, or at all.** Therefore, there can be no assurance that significant fluctuations in the trading price of the Company's common shares will not occur, or that such fluctuations will not materially adversely impact on the Company's ability to raise equity funding without significant dilution to its existing shareholders, or at all.

Financing Risks: The Company has limited financial resources, has no source of operating cash flow and has no assurance that additional funding will be available to it for further exploration and development of its projects or to fulfill its obligations under any applicable agreements. Although the Company has been successful in the past in obtaining financing through the sale of equity securities, there can be no assurance that it will be able to obtain adequate financing in the future or that the terms of such financing will be favorable. Failure to obtain such additional financing could result in delay or indefinite postponement of further exploration and development of its projects with the possible loss of such properties.

Insufficient Financial Resources: The Company does not presently have sufficient financial resources to undertake by itself the acquisition, exploration and development of all of its planned acquisition, exploration and development programs. Future property acquisitions and the development of the Company's properties will therefore depend upon the Company's ability to obtain financing through the joint venturing of projects, private placement financing, public financing, short or long term borrowings or other means. There is no assurance that the Company will be successful in obtaining the required financing. Failure to raise the required funds could result in the Company losing, or being required to dispose of, its interest in its properties.

Dilution to the Company's existing shareholders: The Company will require additional equity financing to be raised in the future. The Company may issue securities at less than favorable terms to raise sufficient capital to fund its business plan. Any transaction involving the issuance of equity securities or securities convertible into common shares would result in dilution, possibly substantial, to present and prospective holders of common shares.

Increased costs: Management anticipates that costs at the Company's projects will frequently be subject to variation from one year to the next due to a number of factors, such as the results of ongoing exploration activities (positive or negative), changes in the nature of mineralization encountered, and revisions to exploration programs, if any, in response to the foregoing. In addition, exploration program costs are affected by the price of commodities such as fuel, rubber and electricity and the availability (or otherwise) of consultants and drilling contractors. Increases in the prices of such commodities or a scarcity of consultants or drilling contractors could render the costs of exploration programs to increase significantly over those budgeted. A material increase in costs for any significant exploration programs could have a significant effect on the Company's operating funds and ability to continue its planned exploration programs.

Mining Industry is Intensely Competitive: The Company's business of the acquisition, exploration and development of mineral properties is intensely competitive. The Company may be at a competitive disadvantage in acquiring additional mining properties because it must compete with other individuals and companies, many of which have greater financial resources, operational experience and technical capabilities than the Company. Increased competition could adversely affect the Company's ability to attract necessary capital funding or acquire suitable producing properties or prospects for mineral exploration in the future.

Permits and Licenses: The operations of the Company will require licenses and permits from various governmental authorities. There can be no assurance that the Company will be able to obtain all necessary licenses and permits that may be required to carry out exploration, development and mining operations at its projects, on reasonable terms or at all. Delays or a failure to obtain such licenses and permits, or a failure to comply with the terms of any such licenses and permits that the Company does obtain could have a material adverse effect on the Company.

Government Regulation: Any exploration, development or mining operations carried on by the Company, will be subject to government legislation, policies and controls relating to prospecting, development, production, environmental protection, mining taxes and labour standards. In addition, the profitability of any mining prospect is affected by the market for precious and/or base metals which is influenced by many factors including changing production costs, the supply and demand for metals, the rate of inflation, the inventory of metal producing corporations, the political environment and changes in international investment patterns.

Environmental Restrictions: The activities of the Company are subject to environmental regulations promulgated by government agencies in different countries from time to time. Environmental legislation generally provides for restrictions and prohibitions on spills, releases or emissions into the air, discharges into water, management of waste, management of hazardous substances, protection of natural resources, antiquities and endangered species and reclamation of lands disturbed by mining operations. Certain types of operations require the submission and approval of environmental impact assessments. Environmental legislation is evolving in a manner which means stricter standards, and enforcement. Fines and penalties for non-compliance are more stringent. Environmental assessments of proposed projects carry a heightened degree of responsibility for companies and directors, officers and employees. The cost of compliance with changes in governmental regulations has a potential to reduce the profitability of operations.

Foreign Countries and Political Risk: All of the mineral properties held by the Company are located in Canada, where mineral exploration and mining activities may be affected in varying

degrees by changes in government regulations such as tax laws, business laws, environmental laws and mining laws, affecting the Company's business. Any changes in regulations or shifts in political conditions are beyond the control of the Company and may adversely affect its business, or if significant enough, may make it impossible to continue to operate in the country. Operations may be affected in varying degrees by government regulations with respect to restrictions on production, price controls, foreign exchange restrictions, export controls, income taxes, expropriation of property, environmental legislation and mine safety.

Dependence Upon Others and Key Personnel: The success of the Company's operations will depend upon numerous factors, many of which are beyond the Company's control, including (i) the ability to design and carry out appropriate exploration programs on its mineral properties; (ii) the ability to produce minerals from any mineral deposits that may be located; (iii) the ability to attract and retain additional key personnel in exploration, marketing, mine development and finance; and (iv) the ability and the operating resources to develop and maintain the properties held by the Company. These and other factors will require the use of outside suppliers as well as the talents and efforts of the Company and its consultants and employees. There can be no assurance of success with any or all of these factors on which the Company's operations will depend, or that the Company will be successful in finding and retaining the necessary employees, personnel and/or consultants in order to be able to successfully carry out such activities.

Surface Rights and Access: Although the Company acquires the rights to some or all of the minerals in the ground subject to the tenures that it acquires, or has a right to acquire, in most cases it does not thereby acquire any rights to, or ownership of, the surface to the areas covered by its mineral tenures. In such cases, applicable mining laws usually provide for rights of access to the surface for the purpose of carrying on mining activities, however, the enforcement of such rights through the applicable courts can be costly and time consuming. In areas where there are no existing surface rights holders, this does not usually cause a problem, as there are no impediments to surface access. However, in areas where there are local populations or land owners, it is necessary, as a practical matter, to negotiate surface access. There can be no guarantee that, despite having the right at law to access the surface and carry on exploration and mining activities, the Company will be able to negotiate a satisfactory agreement with any such existing landowners/occupiers for such access, and therefore it may be unable to carry out mining activities. In addition, in circumstances where such access is denied, or no agreement can be reached, the Company may need to rely on the assistance of local officials or the courts in such jurisdiction. The Company has not, to date, experienced any problems in gaining access to any of its properties.

Title Matters: Although the Company has taken steps to verify the title to the mineral properties in which it has or has a right to acquire an interest in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee title (whether of the Company or of any underlying vendor(s) from whom the Company may be acquiring its interest). Title to mineral properties may be subject to unregistered prior agreements or transfers, and may also be affected by undetected defects or the rights of indigenous peoples. The Company has investigated title to all of its mineral properties and, to the best of its knowledge, title to all of its properties for which titles have been issued are in good standing.

Exploration and Mining Risks: Fires, power outages, labour disruptions, flooding, explosions, cave-ins, landslides and the inability to obtain suitable or adequate machinery, equipment or labour are other risks involved in the operation of mines and the conduct of exploration programs. Substantial expenditures are required to establish reserves through drilling, to develop metallurgical processes, to develop the mining and processing facilities and infrastructure at any site chosen for mining. Although substantial benefits may be derived from the discovery of a major mineralized deposit, no assurance can be given that minerals will be discovered in sufficient quantities to justify commercial operations or that funds required for development can be obtained on a timely basis. The economics of developing mineral properties is affected by many factors including the cost of operations, variations of the grade of ore mined, fluctuations in the price of gold or other minerals produced, costs of processing equipment and other factors such as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals and environmental protection. In addition, the grade of mineralization ultimately mined may differ from that indicated by drilling results and such differences could be material. Short term factors, such as the need for orderly development of ore bodies or the processing of new or different grades, may have an adverse effect on mining operations and on the results of operations. There can be no assurance that minerals recovered in small scale laboratory tests will be duplicated in large scale tests under on-site conditions or in production scale operations. Material changes in geological resources, grades, stripping ratios or recovery rates may affect the economic viability of projects.

Regulatory Requirements: The activities of the Company are subject to extensive regulations governing various matters, including environmental protection, management and use of toxic substances and explosives, management of natural resources, exploration, development of mines, production and post-closure reclamation, exports, price controls, taxation, regulations concerning business dealings with indigenous peoples, labour standards on occupational health and safety, including mine safety, and historic and cultural preservation. Failure to comply with applicable laws and regulations may result in civil or criminal fines or penalties, enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions, any of which could result in the Company incurring significant expenditures. The Company may also be required to compensate those suffering loss or damage by reason of a breach of such laws, regulations or permitting requirements. It is also possible that future laws and regulations, or more stringent enforcement of current laws and regulations by governmental authorities, could cause additional expense, capital expenditures, restrictions on or suspension of the Company's operations and delays in the exploration and development of the Company's properties.

Limited Experience with Development-Stage Mining Operations: The Company has very limited experience in placing mineral resource properties into production, and its ability to do so will be dependent upon using the services of appropriately experienced personnel or entering into agreements with other major resource companies that can provide such expertise. There can be no assurance that the Company will have available to it the necessary expertise when and if it places its resource properties into production.

Uncertainty of Resource Estimates/Reserves: Unless otherwise indicated, mineralization figures presented in the Company's filings with securities regulatory authorities, press releases and

other public statements that may be made from time to time are based upon estimates made by Company personnel and independent geologists. These estimates are imprecise and depend upon geological interpretation and statistical inferences drawn from drilling and sampling analysis, which may prove to be unreliable. There can be no assurance that:

- these estimates will be accurate;
- reserves, resource or other mineralization figures will be accurate; or
- this mineralization could be mined or processed profitably.

Because the Company has not commenced production at any of its properties, and has not defined or delineated any proven or probable reserves on any of its properties, mineralization estimates for the Company's properties may require adjustments or downward revisions based upon further exploration or development work or actual production experience. In addition, the grade of ore ultimately mined, if any, may differ from that indicated by drilling results. There can be no assurance that minerals recovered in small-scale tests will be duplicated in large-scale tests under on-site conditions or in production scale. The resource estimates contained in the Company's filings with securities regulatory authorities, press releases and other public statements that may be made from time to time have been determined and valued based on assumed future prices, cut-off grades and operating costs that may prove to be inaccurate. Extended declines in market prices for gold, silver, copper, iron or other metals may render portions of the Company's mineralization uneconomic and result in reduced reported mineralization. Any material reductions in estimates of mineralization, or of the Company's ability to extract this mineralization, could have a material adverse effect on the Company's results of operations or financial condition. **The failure to establish additional proven or probable reserves could restrict the Company's ability to successfully implement its strategies for long-term growth.**

No Assurance of Profitability: The Company has no history of earnings and, due to the nature of its business there can be no assurance that the Company will ever be profitable. The Company has not paid dividends on its shares since incorporation and does not anticipate doing so in the foreseeable future. The only present source of funds available to the Company is from the sale of its common shares or, possibly, from the sale or optioning of a portion of its interest in its mineral properties. Even if the results of exploration are encouraging, the Company may not have sufficient funds to conduct the further exploration that may be necessary to determine whether or not a commercially mineable deposit exists. While the Company may generate additional working capital through further equity offerings or through the sale or possible syndication of its properties, there can be no assurance that any such funds will be available on favorable terms, or at all. At present, it is impossible to determine what amounts of additional funds, if any, may be required. Failure to raise such additional capital could put the continued viability of the Company at risk.

Uninsured or Uninsurable Risks: Exploration, development and mining operations involve various hazards, including environmental hazards, industrial accidents, metallurgical and other processing problems, unusual or unexpected rock formations, structural cave-ins or slides, flooding, fires, metal losses and periodic interruptions due to inclement or hazardous weather conditions. These risks could result in damage to or destruction of mineral properties, facilities or other property, personal injury, environmental damage, delays in operations, increased cost of operations, monetary losses and possible legal liability. The Company may not be able to obtain insurance to cover these risks at economically feasible premiums or at all. The Company may elect not to insure

where premium costs are disproportionate to the Company's perception of the relevant risks. The payment of such insurance premiums and of such liabilities would reduce the funds available for exploration and production activities.

Enforcement of Civil Liabilities: As some of the assets of the Company and its subsidiaries were located in the United States, it may be difficult or impossible to enforce judgments granted by a court in Canada against the assets of the Company and its subsidiaries.

The Company may be a "passive foreign investment company" under the U.S. Internal Revenue Code, which may result in material adverse U.S. federal income tax consequences to investors in the Company's common shares that are U.S. taxpayers: Investors in the Company's common shares that are U.S. taxpayers should be aware that the Company expects it will in the current year be, a "passive foreign investment company" under Section 1297(a) of the U.S. Internal Revenue Code (a "PFIC"). If the Company is or becomes a PFIC, generally any gain recognized on the sale of the Company's common shares and any "excess distributions" (as specifically defined) paid on such common shares must be allocated to each day in a U.S. taxpayer's holding period for the common shares. The amount of any such gain or excess distribution allocated to prior years of such U.S. taxpayer's holding period for the common shares generally will be subject to U.S. federal income tax at the highest tax applicable to ordinary income in each such prior year, and the U.S. taxpayer will be required to pay interest on the resulting tax liability for each such prior year, calculated as if such tax liability had been due in each such prior year.

Alternatively, a U.S. taxpayer that makes a "qualified electing fund" (a "QEF") election with respect to the Company generally will be subject to U.S. federal income tax on such U.S. taxpayer's pro rata share of the Company's "net capital gain" and "ordinary earnings" (as specifically defined and calculated under U.S. federal income tax rules), regardless of whether such amounts are actually distributed by the Company. U.S. taxpayers should be aware, however, that there can be no assurance that the Company will satisfy record keeping requirements under the QEF rules or that the Company will supply U.S. taxpayers with required information under the QEF rules, in event that the Company is a PFIC and a U.S. taxpayer wishes to make a QEF election. As a second alternative, a U.S. taxpayer may make a "mark-to-market election" if the Company is a PFIC and the Company's common shares are "marketable stock" (as specifically defined). A U.S. taxpayer that makes a mark-to-market election generally will include in gross income, for each taxable year in which the Company is a PFIC, an amount equal to the excess, if any, of (a) the fair market value of the common shares as of the close of such taxable year over (b) such U.S. taxpayer's adjusted tax basis in the common shares.

Due to the extreme complexity of the PFIC rules and the potentially materially adverse consequence to a shareholder that is a U.S. taxpayer of the Company being a PFIC, it is critical that each shareholder that is a U.S. taxpayer consult with that shareholder's U.S. tax adviser before undertaking any transactions in the Company's common shares.

Off-Balance Sheet Arrangements

The Corporation does not have any off-balance sheet arrangements.

Proposed Transactions

There are no proposed transactions as at December 31, 2015 and to the date of this MDA.

Additional Disclosure for Venture Issuers without Significant Revenue

Additional disclosure concerning the Company's general and administrative expenses and resource property costs is provided in the Company's Statement of Operations and Deficit and Schedule of Resource Property Expenditures contained in its condensed interim financial statements for the years ended December 31, 2015 that is available on the Company's website at www.brixtonmetals.com or on its SEDAR Page Site accessed through www.sedar.com.

Disclosure of Outstanding Share Data

Brixton's authorized capital is unlimited common shares without par value and unlimited preferred shares without par value. As at February 29, 2016, the following common shares are outstanding (post-consolidated):

	# of Shares	Exercise Price	Expiry Date
Issued and Outstanding Common Shares	14,834,659		
Stock Options	35,000	\$0.14	April 7, 2025
Fully Diluted at February 29, 2016	14,869,659		

Transactions with Related Parties

The Company has entered into certain transactions with related parties during the three months ended December 31, 2015. All transactions with related parties have occurred in the normal course of operations and are measured at the exchange amount, which is the amount of consideration established and agreed upon by the related parties.

A description of these related party transactions is as follows:

Name of Director/Officer	Position	Category	Amount Paid/Accrued
Gary Thompson	Director, President & CEO	Salary	\$50,500
Cale J. Moodie	Director, CFO	Consulting Fees ⁽¹⁾	\$28,750
George Salamis	Director	Director Fees ⁽²⁾	\$3,000
Ian Ball	Director	Director Fees	\$3,000
Sorin Posescu	VP Geology	Salary	\$33,000

1. Amounts paid to Spartan Pacific Financial Ltd., a company controlled by Mr. Moodie, for accounting related services.
2. Consulting fees for services were paid to Spartan Consulting Inc., a company controlled by Mr. Salamis, for director fees.

Share based payments to key management personnel amount to \$nil (2014 - \$nil).

Contractual Obligations

The Corporation presently has no contractual obligations.

Accounting Policies and Estimates

Significant judgments are used in the Company's assessment of its ability to continue as a going concern which is described in note 1 of the condensed interim financial statements. Significant accounting estimates are used in the determination of fair value and value in use for purposes of the recoverability of the carrying value of mineral properties, determination of reclamation obligations, valuation of share-based payments, and the valuation of deferred income taxes. These estimates involve considerable judgment and are, or could be, affected by significant factors that are out of the Company's control. Actual results may differ from these estimates.

Impairment

At the end of each reporting period the carrying amounts of the Company's long lived assets, including mineral property interests, are reviewed to determine whether there is any indication that those assets are impaired. If any such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment, if any. The recoverable amount is the higher of fair value less costs to sell and value in use. Fair value is determined as the amount that would be obtained from the sale of the asset in an arm's length transaction between knowledgeable and willing parties. In assessing value in use, the estimated future cash flows are discounted to their present value using a discount rate that reflects current market assessments of the time value of money and the risks specific to the asset.

If the recoverable amount of an asset is estimated to be less than its carrying amount, the carrying amount of the asset is reduced to its recoverable amount and the impairment loss is recognized in the profit or loss for the period. For an asset that does not generate largely independent cash inflows, the recoverable amount is determined for the cash generating unit to which the asset belongs. Where an impairment loss subsequently reverses, the carrying amount of the asset (or cash generating unit) is increased to the revised estimate of its recoverable amount, but to an amount that does not exceed the carrying amount that would have been determined had no impairment loss been recognized for the asset (or cash-generating unit) in prior years. A reversal of an impairment loss is recognized immediately in profit or loss.

Share-based Payments

The factors affecting share-based payments include estimates of when stock options might be exercised and the stock price volatility. The timing for exercise of options is out of the Company's control and will depend, among other things, upon a variety of factors including the market value of Company shares and financial objectives of the holders of the options. The Company has used historical data to determine volatility in accordance with Black-Scholes modeling, however future volatility is inherently uncertain and the model has its limitations. While these estimates can have a material impact on the share-based payments and hence, results of operations, there is no impact on the Company's financial condition or liquidity.

New Standards Not Yet Adopted

Standards and interpretations issued but not yet effective applicable to the Company:

- IFRS 9, Financial Instruments

- IFRS 15, Revenue Recognition

The Company is evaluating the impact that these standards will have on the condensed interim financial statements.

Disclosure of Management Compensation

In accordance with the requirements of Section 19.5 of TSXV Policy 3.1, the Company provides the following disclosure with respect to the compensation of its directors and officers during the period:

1. During the three months ended December 31, 2015, the Company did not enter into any standard compensation arrangements directly or indirectly with directors and officers of the Company, for their services as directors or officers, or in any other capacity.
2. During the three months ended December 31, 2015, directors and officers of the Company were paid (or accrued) the following amounts, directly or indirectly, for their services as directors and officers or in any other capacity by the Company and its subsidiaries:

Name of Director/Officer	Position	Category	Amount Paid/Accrued
Gary Thompson	Director, President & CEO	Salary	\$50,500
Cale J. Moodie	Director, CFO	Consulting Fees ⁽¹⁾	\$28,750
George Salamis	Director	Director Fees ⁽²⁾	\$3,000
Ian Ball	Director	Director Fees	\$3,000
Sorin Posescu	VP Geology	Salary	\$33,000

1. Amounts paid to Spartan Pacific Financial Ltd., a company controlled by Mr. Moodie, for accounting related services.
2. Consulting fees for services were paid to Spartan Consulting Inc., a company controlled by Mr. Salamis, for director fees.

Recent Developments and Outlook

The Company expects to obtain financing in the future primarily through further equity and/or debt financing. There can be no assurance that the Company will succeed in obtaining additional financing, now or in the future. Failure to raise additional financing on a timely basis could cause the Company to suspend its operation and eventually to forfeit or sell its interest in its exploration and evaluation assets.

Financial Instruments and Risk Management

IFRS 7, Financial Instruments: Disclosures (“IFRS 7”) establishes a fair value hierarchy that prioritizes the inputs to the valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are described below:

- Level 1: Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities.
- Level 2: Quoted prices in markets that are not active, or inputs that are observable, either directly or indirectly, for substantially the full term of the asset or liability.
- Level 3: Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (supported by little or no market activity).

The Company's cash and restricted cash are classified as Level 1 of the fair value hierarchy. The carrying value of Receivables and accounts payable and accrued liabilities, approximates their fair values because of the short-term nature of these instruments.

Financial risk factors

The Company's risk exposures and the impact on the Company's financial instruments are summarized below:

a) Credit risk

Credit risk is the risk of loss associated with a counter party's inability to fulfill its payment obligations. The Company's receivables consist of amounts due from a Canadian government agency and cash and restricted cash is held with large and stable Canadian chartered banks.

b) Liquidity risk

The Company's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet its liabilities when they come due. As of December 31, 2015, the Company had cash of \$343,219 to settle current liabilities of \$20,520. All of the Company's financial liabilities are subject to normal trade terms.

c) Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and commodity and equity prices.

Interest rate risk

The Company has cash balances and no interest-bearing debt. The Company's current policy is to invest excess cash in investment-grade short-term deposit certificates issued by its banking institutions. The Company periodically monitors the investments it makes and is satisfied with the credit ratings of its banks.

Foreign currency risk

The Company is exposed to foreign currency risk on fluctuations related to cash and accounts payable and accrued liabilities that are denominated in United States Dollars. The Company's exposure to foreign currency is detailed in note 14 of the condensed interim financial statements.

Price risk

Brixton Metals Corporation

Management Discussion and Analysis

For the three months ended December 31, 2015 and 2014, and containing information up to February 29, 2016

The Company is exposed to price risk with respect to commodity and equity prices. Equity price risk is defined as the potential adverse impact on the Company's earnings due to movements in individual equity prices or general movements in the level of the stock market. Commodity price risk is defined as the potential adverse impact on earnings and economic value due to commodity price movements and volatilities. The Company closely monitors commodity prices of gold and other precious and base metals, individual equity movements, and the stock market to determine the appropriate course of action to be taken by the Company.

Approval

The Board of Directors of Brixton has approved the disclosure contained in this MD&A. A copy of this MD&A will be provided to anyone who requests it.
