

Brixton Metals Drills 3.55% Cobalt over 0.98m at Its Langis Project

May 30, 2018 – Brixton Metals Corporation (TSXV: BBB) (the “Company” or “Brixton”) is pleased to announce drill results from its wholly owned Langis Mine Project located in the Cobalt Camp, Ontario, Canada.

Highlights from three drill holes at the Langis Project

- Drill hole LM18-23 intersected **0.98m of 3.55% cobalt, 0.10% nickel**
- Drill hole LM18-24 intersected **22.00m of 0.11% nickel, 0.01% cobalt**

Chairman and CEO of Brixton, Gary R. Thompson stated, “Brixton Metals has drilled some of the highest grade cobalt intercepts in the world from its Cobalt Camp projects in Ontario. Drill hole LM18-23 returned 3.55% cobalt over a 0.98m drilled interval, which is equivalent to more than 5000 g/t silver. Also we continue to show broad low grade Co-Ni-Ag intervals below the unconformity in the basement Archean meta-volcanics and meta-sediments. We plan to drill follow up holes on the highest grade intervals of cobalt and silver that were drilled thus far and further test for possible higher grade zones within the broad mineralized zones within the basement rocks. The Archean basement rocks which host these broad Co-Ni-Ag mineralized zones outcrop west of the underground workings at the Langis mine and will be drill tested.”

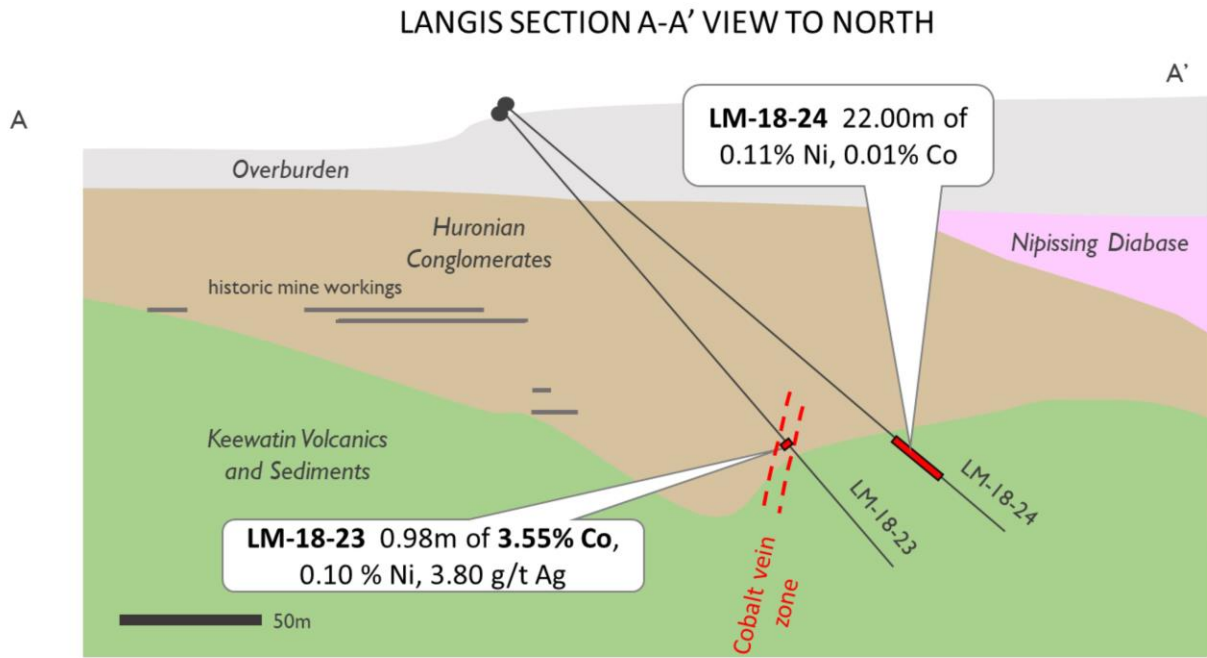

Table of Highlights from drill holes LM18 (22-24):

Hole ID	From (m)	To (m)	Interval (m)	Silver g/t	Nickel %	Cobalt %	CoEq %	AgEq g/t	AgEQ GxT g/txm
LM-18-22	139.00	149.00	10.00	2.24	0.02	0.10	0.11	154.15	1541.46
LM-18-22	153.00	163.00	10.00	64.71	0.14	0.01	0.07	107.93	1079.30
LM-18-22	193.00	198.00	5.00	0.10	0.11	0.01	0.02	35.37	176.85
LM-18-23	157.52	158.50	0.98	3.80	0.10	3.55	3.57	5189.55	5085.76
LM-18-24	171.00	177.00	6.00	1.68	0.01	0.01	0.01	21.55	129.28
LM-18-24	186.00	208.00	22.00	0.48	0.11	0.01	0.03	36.56	804.41

Cobalt Equivalent values (CoEq) were calculated using the formula $CoEq = \$16.5 \times Ag \text{ g/t} \div 31.104 + \$35 \times \% Co \div 100 \times 2204.63 + \$5.50 \times \% Ni \div 100 \times 2204.63 \div \$35 \div 2204.63 \times 100$. This method assumes full metal recoveries.

Silver Equivalent values (AgEq) were calculated using the formula $AgEq = \$16.5 \times Ag \text{ g/t} \div 31.104 + \$35 \times \% Co \div 100 \times 2204.63 + \$5.50 \times \% Ni \div 100 \times 2204.63 \div \16.5×31.104 . Metal prices used in this calculation include: \$16.5 per ounce for Ag, \$5.5 per pound for Ni and \$35 per pound for Co. This method assumes full metal recoveries. True width cannot be determined at this time and reported widths are drilled intervals.

Quality Assurance & Quality Control

Sealed samples were shipped by the Company geologists to ALS Minerals preparation lab in Sudbury, Ontario. ALS Minerals Laboratories are registered to ISO 9001:2008 and ISO 17025 accreditations for laboratory procedures. Blank, duplicate and certified reference materials were inserted into the sample stream. Analysis for gold was done by Fire Assay with AA finish. All other elements were analyzed by Aqua Regia Digest with ICP-AES finish. Cobalt over-limits were analyzed with Sodium Peroxide Fusion and AES finish. Silver over-limits were analyzed by fire assay with gravimetric finish. Base metal over-limits were analyzed with Aqua Regia Digest and AES finish. A copy of the QAQC protocols can be viewed at the Company's website.

Mr. Sorin Posescu, P.Geo, is a Qualified Person as defined under National Instrument 43-101 standards and has reviewed and approved this news release.

In addition, the Company has acquired mineral lands in the Atlin Area of BC expanding its Atlin Gold project to 68,309 hectares. The 6 claims of 9614 hectares were acquired one hundred percent subject to a one percent to net smelter royalty to the vendor for 260,000 common shares in the Company.

About the Langis and Hudson Bay Silver-Cobalt Project

Brixton's wholly owned Langis and Hudson Bay past producing mines are located 500km north from Toronto, Ontario, Canada. The cobalt-silver mineralization occurs as steeply-moderately and in some cases shallow dipping veins and as disseminations within any of the three main rock types: Archean volcanics, Coleman Member sediments and Nipissing diabase. The Langis mine produced 10.4Moz of silver at 25 oz/t Ag and 358,340 pounds of cobalt and the Hudson Bay mine produced 6.4Moz of silver at 123 oz/t Ag and 185,570 pounds of cobalt. Historically, the Cobalt Camp produced 50M pounds of cobalt as a by-product of 500M ounces of silver production.

About Brixton Metals Corporation

Brixton is a Canadian exploration and development company focused on the advancement of its gold and silver projects toward feasibility. Brixton wholly owns four exploration projects, the Thorn gold-silver and the Atlin gold projects located in NWBC, the Langis-Hudson Bay silver-cobalt project in Ontario and the Hog Heaven silver-gold-copper project in NW Montana, USA. The Company is actively seeking JV partners to advance one or more of its projects. Brixton Metals Corporation shares trade on the TSX-V under the ticker symbol **BBB**. For more information about Brixton please visit our website at www.brixtonmetals.com.

Information set forth in this news release may involve forward-looking statements under applicable securities laws. Forward-looking statements are statements that relate to future, not past, events. In this context, forward-looking statements often address expected future business and financial performance, and often contain words such as "anticipate", "believe", "plan", "estimate", "expect", and "intend", statements that an action or event "may", "might", "could", "should", or "will" be taken or occur, including statements that address potential quantity and/or grade of minerals, potential size and expansion of a mineralized zone, proposed timing of exploration and development plans, or other similar expressions. All statements, other than statements of historical fact included herein including, without limitation, statements regarding the use of proceeds. By their nature, forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause our actual results, performance or achievements, or other future events, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the following risks: the need for additional financing; operational risks associated with mineral exploration; fluctuations in commodity prices; title matters; and the additional risks identified in the annual information form of the Company or other reports and filings with the TSXV and applicable Canadian securities regulators. Forward-looking statements are made based on management's beliefs, estimates and opinions on the date that statements are made and the Company undertakes no obligation to update forward-looking statements if these beliefs, estimates and opinions or other circumstances should change, except as required by applicable securities laws. Investors are cautioned against attributing undue certainty to forward-looking statements.
